                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STSB are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the BST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

Direct Submission

Center project name: H\_NH0809C23 ----- Summary Statistics

```
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                   SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhoo, B., Frengen, B., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP11-809C23;
actual end is at base position 172281 of RP11-809C23.

Submitted (05-DEC-2001) Genome Center, University of Washington,  Box 352145, Seattle, WA 98195, USA  (bases 1 to 169418)  Sauth, R.K., Olson, W.V., Zhou, Y., James, R.A., Rouse, G., Wu, Z.,  Saenphimmachak, C., Phelps, K.A., Buckley, D., Kibukawa, M., Raymond, C.  and Haugen, E.D.  Direct Submission  Direct Submission  Conversity of Washington.	 Web site: http://www.genome.washington.edu Conteact: uwgettgs@u.washington.edu Drafting Center: WUGSC	Center project name: chr-3 Center clone name: RP11-66G8 (bc0186) Summary Statistics Sequencing vector: unknown; 62% of reads Sequencing vector: plasmid; L08752; 38% of reads	Chemistry: Dye-terminator ET; 66% of reads Chemistry: Dye-terminator Big Dye; 34% of reads Assembly program: Phrap; version 0.990319 Chemistry: Dye-terminator Big Dye; 34% of reads	Consensus quality: 169408 bases at least Q30 Consensus quality: 169418 bases at least Q20 Consensus quality: 169418 sum-of-contige Insert size: 169418; sum-of-contige	Oualley coverage: Iz.zx in \( \text{in \( \text{Lorenzy} \) \) \) \) \) \( \text{Coverage} \) \) \( \text{In \( \text{Lorenzy} \) \) \) \( \text{Coverlapping Sequences} \) \( \text{Sequences} \) \( \text{Soverlap} \) \( \text{System} \) \(	5: KFII-1953D3 (UNGC:DCV129) ALIOHIO, 7009 DF COLLEGE Sequence Quality has been annotated with sequence quality Afric entry has been annotated with sequence quality actimates commuted by the Phran Assembly Drogram.	All manually edited bases have been reduced to quality zero.  Quality levels above 40 are expected to have less than  1 error in 10,000 bp.  Base-by-base quality values are not generally visible from the  GenBank flat file format but are available as part	This sequence was finished as follows unless otherwise noted:  all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing		Sequence Validation: This sequence has been validated by Multiple Complete Digest fingerplinting. Comparison of the experimentally derived digest fingerplinting. Comparison of the experiments is given below.	The decrease with sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp)	are not resolved in the fingerprint and hence do not appear	SeqDerMap FngrPrnt SeqDerMap FngrPrnt	8696 8873 8104 8155 459 <800

The invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the polypeptides. The genomic sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid arthritis-associated viruses, and also for prevention and treatment of infection with these viruses

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid which comprises the gene of a retrovirus associated with multiple sclerosis or rheumatoid arthritis. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis. The present sequence is used in the exemplification of the invention.

cc multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise proteins or defined peptides (including immunodominant peptides) encoding the proteins or defined peptides (including immunodominant peptides) antigenic peptides or conserved mocife). Also included are a process for detecting a virus associated with multiple sclerosis or rheumatoid or arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a virus associated with multiple sclerosis or rheumatoid arthritis, a polypeptide exhibiting an inhibitory activity on the proteolytic, reverse transcriptase or ribonuclease H activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by immunogenic agent consisting of the antigenic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis, or for detecting in a biological sample, the presence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis, or for sequence is a claimed MSRV-associated equence whose identity cannot be accurately determined. Note: The SRQ ID numbers for the sequences as displayed in the main body of the patent do not match the SRO ID numbers or in the sequence listing. Consequently those sequences mentioned in the numbers intended to claim.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               540

The present sequence represents the nucleotide sequence corresponding to the 3' env region and long terminal repeat sequences from clone CL6 of Multiple Sclerosis retrovirus (MSKV-1). The specification describes a long terminal repeat (LTR)-RUS region which encodes the expression of a MSKV-1 protein. This is unusual for LTRs, in particular in the RUS region. The sequence includes CAAT and TATA signals which are present in the US and are not directed towards the CDS indicated in the features table. Probes and antibodies to the MSKV-1 retrovirus presence of MSKV-1 retrovirus in a biological sample. (Updated on 06-AUG-

and nucleic acid molecules encoding such proteins. EMBRY sequences are useful for screening modulators useful for treating or preventing disorders associated with abnormal expression of EMBRY. The disorders are include reproductive disorders such as infertility, endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory disorder such as acquired immune deficiency syndrome (AIDS), allergies, contact dermatitis; disorders of the placenta such as precelampsia, abruptio placentae etc. Sequences of the invention are also useful for analysing a proteome of a tissue or a cell type. EMBRY proteins are useful as immunogens for preparing antibodies. Polynucleotides of the invention are useful for creating knockin humaniaed animals or transgenic animals to model human diseases. They are also used in gene therapy. The
                                                                                                                                                                                      New polypeptides of human embryogenesis associated proteins for screening modulators useful for treating or preventing disorders e.g. endometriosis, infertility, allergy, preeclampsia.
                                                                                                                                                                                                                                                                         invention relates to human embryogenesis associated proteins (EMBRY)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a multiple sclerosis (MS) associated retrovirus (MSRV) genomic fragment used in the method of the invention. Then invention provides complete or partial genomic sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the olypeptides. The genomic sequences, polypeptides and antibodies are also polypeptides. The genomic sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid arthritissesciated viruses, and also for prevention and treatment of infection

New isolated nucleic acid and their fragments having the pol gene of a retrovitus, useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid which comprises the gene of a retrovirus associated with multiple sclerosis or rheumatoid arthitis. The methods and compositions of the present invention are useful for diagnosing, preventing and/or treating multiple sclerosis and/or rheumatoid arthitis. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CAAATTGTTCTTCAAATGGAGCACCAGATGGAGTCCATGACTAAGATCCACCGTGGACCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vi) for tasating carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma are apprehensively to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding capacinome. This patent is an equivalent to basic patent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          19571 CCCTGTATCTTTAACCTCCTTGTTAAGTTTGTCTCTTCCAGAATTGAAACTGTAAAACTA 19630
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                    9

                                                                                                                                                               ò
                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel human diagnostic and therapeutic Dolymucleotides designated dithp (ACC46080-ACC46749) and to their encoded proteins (DITHP; ABR41136-ABR41812). The invention also relates to polymucleotide sequences at least 90% identical to the dithp CDNA sequences of the invention; recombinant vectors, host cells and sequences of the invention; recombinant vectors, host cells and transgenic organisms comprising a dithp nucleic acid sequences; methods of proteins microarrays comprising dithp nucleic acid sequences; methods of detecting dithp nucleotide and protein sequences; methods of corpobe. Dithp nucleic acid sequences and DITHP proteins and methods of assessing the toxicity of test compounds using a dithp hybridisation probe. Dithp nucleic acid sequences and DITHP proteins may be used in the assessing the toxicity of fconditions including cancer and other cell conditions including cancer and other cell proliferative disorders; autoimmune or inflammatory disorders; bacterial, viral, fungal or parasitic infections; hormonal disorders; metabolic disorders; neurological disorders; gastrointestinal disorders; transport disorders; and connective tissue disorders. They may also be used to screen for modulators of protein acityty or gene expression. DITHP proteins can additionally be used in analysis of the proteome of a tissue or cell type and to induce antibodies. They may also be used to additionally useful in somatic or germline gene therapy of the disorders and additionally useful in somatic or germline gene therapy of the disorders or cell type and to induce antibodies. They may also be used to the protein additionally useful in somatic or germline gene therapy of the disorders and primers, in genotyping and identification of individuals, in the generation of transgenic animal models of human disease or knock in the generation of transgenic animal models of human disease or knock in which is pastent dimet form part of the printed specification, which is patent directions of the protein acids a

antigenic peptides or conserved motifs). Also included are a process for detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a virus associated with multiple sclerosis or rheumatoid arthritis, a polymeristation of a nucleic acid of a virus that a polymeristation an inhibitory activity on the proteolytic, reverse transcriptase or ribonuclease H activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by an antibody activity a human or animal body or cells with an immunogenic agent consisting of the antigenic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis, or for detecting in a biological sample, the presence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis. The present sequence is a claimed MSRV-associated sequence whose identity cannot be accurately determined. Note: The SEQ ID numbers for the sequences as a displayed in the main body of the patent do not match the SEQ ID numbers in the sequence listing. Consequence whose sequences mentioned in the claims may not be the sequences the authors intended to claim.

This invention describes novel human secreted proteins encoded by polynucleotides isolated from human adult testes, adult brain, adult blood or adult placenta, or murine adult bone marrow or thymus cDNA blood or adult placenta, or murine adult bone marrow or thymus cDNA activities which would make them unitable for treating, preventing or activities which would make them unitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional continity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haemostatic activity, and thrombolytic activity, chemotactic/emoximineic activity, haemostatic activity, and thrombolytic activity, receptor/ligand activity, and tumour activity, and tumour activity, adherin/tumour invasion suppressor activity, and tumour furnition activity. The polynucleotides are also stated to be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              2430
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2490
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2323 CCCTGTATCTTTAACCTCCTTGTTAACTTTGTCTCTTCCAGAATCGAAGCTGTAAAACTA 2382

This is the human secreted protein AJ172 2 nucleotide sequence, obtained from a human adult testes CDNA library. The invention relates to secreted human and murine proteins. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or amelorating medical conditions in humans and animals. Detection of the levels of the proteins can be used for the clasmosis of e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested activities include nutritional activity (e.g. in feeds). Cytokine and cativities include nutritional activity, immune stimulating (e.g. as cacivities) or suppressing activity, haemostatic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, creeptor/ligand activity, and tumour inhibition activity. The invasion suppressor activity, and tumour inhibition activity. The polynucleotide sequences are also stated to be useful for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CAACCCCTTTGGGTCCCCTCCCTTTGTATGGGAGCTCTGTTTTCATGTTTCACTCT

                response syndrome (SIRS), ischaemia-reperfusion injury, Crohn's disease, anaphylaxis and hypersensitivity. Proteins are also useful for inducing tumour immunity, for inducing bone, cartilage, tendon, ligament and/or nerve growth or regeneration, for proliferating neural cells and for regenerating nerve and brain tissue, for inducing fertility and for inhibiting tumour growth. Proteins are also useful as chemokine for mammalian cells (e.g., monocytes, fibroblasts, neutrophils), and also useful as inhibitors of receptor/ligand interactions. The present
coagulation disorders, inflammatory diseases (e.g. systemic inflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a protein comparising fully defined A2302 1 protein or BD127 1 6 protein. The polynucleotides are useful for expressing recombinant proteins for analysis and are also useful as chromosome markers or tags to identify chromosomes or to map related gene positions. The proteins are useful as amino acid supplement, carbon abource, nitrogen source and carbohydrate source. The proteins are useful for treating various immune deficiencies and disorders (e.g. severe combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis), allergic reactions (e.g. asthma), myeloid or lymphoid cell deficiencies, osteoporosis or osteoarthritis, peripheral nervous system diseases (e.g. peripheral neuropathy, Alzheimer's disease, Parkinson's disease),

```
The present sequence encodes a human endogenous retrovirus envelope protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope polypeptides and polymucleotides are used to produce therapeutic or prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of other types of syncytia), and to promote adhesion of cells in grafts or cellular repair processes. Expression of sequences antisense to the polymucleotide are used to prevent formation of syncytia
                                                                                                                                                                                                                                                         Detecting expression of human endogenous retrovirus envelope protein in cells of a tissue or culture, from its ability to induce syncytia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cccigiaicirmaaccrccircriaacrirdrcicrccagaarcgaagcrcraaaacha

The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lugus erythematosus, insulindependent diabetes and related pathologies) and of abnormal or susceptibility to these conditions, or proximity markers for associated with this susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           569
